Summer Webinar Series Announcement

An item I have not discussed here at Ed's Boat Tips is the ABYC webinar series. These webinars, although generally targeting the marine industry professional, sometimes offer some really great information for boater's, especially tech-savvy boaters. So, you may want to follow the links below to see if you might find something of interest. The sessions typically last from one hour to about 90 minutes and are presented by some of the best presenters in the ABYC stable of speakers. I'll be doing the seminar listed as "Using a TDR to Trace On Board Electrical Faults" in July.

So, if you are interested in learning some of the fine details about your boat or some advanced trouble-shooting techniques, check it out:
